

BEAN-TO-CUP ESPRESSO MACHINE

FAEX20CP11

PRODUCT FEATURES

Autosteam

A device for heating and frothing large quantities of milk without manual intervention. The Milk4 version allows you to customise the temperature and level of emulsion of the frothed milk: not frothed, a little cream, standard cream, lots of cream.

Smartboiler

System capable of managing the accumulation of energy stored in the boiler to allow a maximum constant supply of steam and water, even with intensive use of the machine.

Energy Saving Mode

Software that allows the boiler pressure to be lowered when the machine is not to brew coffee for a significant period of time.

Automatic Washing Cleaning (AWS)

The machine runs programmable washing cycles throughout the day, using only water for cleaning during operation and special detergents before switching off.

Milk Precision System

System for frothing milk and dispensing it directly into the cup. It is possible to froth milk cold, using air only, or hot, using steam.
